

The MM10 / MMR10 series is used in applications where a miniaturized displacement sensor is required.

- Linear potentiometer (conductive plastic) with almost infinite resolution
- Measuring lengths from 8 mm to 15 mm
- Very compact dimensions
- Double bearing push rod
- Long lifetime (up to 40 million movements)
- With and without spring return (MMR10-8..12 internal, MMR10-15 external)
- optionally with reduced spring force

The very compact displacement sensor has an excellent lifetime due to the high quality sleeve bearing. It can also be integrated directly onto a printed circuit board. The spring return with optional light spring rate opens up additional applications.
