Multiturn Hybrid Potentiometer

Series HHS17

The HHS17 potentiometers in 22 mm housing are suitable for applications where a long life span and very high-resolution multiturn potentiometer with servo flange is important.

- Very high-resolution, long-lasting and clean signal
- No winding jumps due to hybrid technology
- Optional version HHS17xxR with slipping clutch
- With many options

The high-resolution precision potentiometers of the HHS17 series have a wire-wound resistor element, which is finished with a conductive plastic layer. Thus the so-called winding jumps are omitted and the resolution is almost infinite. Due to the smooth surface of the resistance element, the hybrid potentiometer has a significantly longer life span and qualifies it as a position feedback in closed loop control circuits. In addition, an optional integrated slipping clutch protects the potentiometer from damage by overrunning the end stops and facilitates the zero point adjustment. The potentiometer is available in a 3, 5 or 10 turn version. The radial gold-plated connection pins are suitable for flat connectors (2.8 mm according to DIN 46247 part 3).
